

Creating Intelligent Environments

Insulation Solutions Guide

Has anyone ever put more thought into insulation?

Our world has changed.

The way we live is affecting our planet more than ever, and the buildings we construct need to address this – now.

It's time to think carefully about our future. All our futures. What we do today will have an immeasurable impact on tomorrow. And if we do the right thing, we'll all benefit. As will the next generation.

Superglass may be a brand with 40 years behind it, but our thinking is light years ahead. We create intelligent insulation solutions that enable comfortable living and working environments. And that protect our global environment by saving energy and using recycled glass.

A global leader

We may still be based in Scotland, but we're part of global leader in roofing, waterproofing and insulation TECHNOMICOL – a business with over 6500 people, 51 manufacturing plants and offices in 79 countries, dedicated to researching and investing in new energy saving solutions to improve the lives of millions of people worldwide.

So while insulation is what we make, what we contribute makes an important difference to our planet.

The smartest way to use energy is to not use it at all.

That's the underlying principle behind Superglass thinking. It drives everything we do – from creating new ways of insulating to helping housebuilders make best use of resources.

We've long been innovators – bringing new ideas, products and thinking to the construction industry. We were first to introduce Multi-Roll to the market in the early 1990s, for example – the first glass mineral wool product with perforations so installers could choose their required width – and more recently, developed blown solutions to meet the huge surge in demand for retrofit cavity wall and loft insulation.

Europe's most advanced manufacturing plant

Our plant in Stirling was transformed by a £9.2million investment in 2013, followed by the opening of the Superglass Innovation Centre in 2015. And when we became part of global building materials group TECHNOMICOL, it received a further £37million investment.

But Superglass is more than just a manufacturer of insulation. We're technology pioneers – able to use our expertise in glass chemistry for the benefit of everyone, now and for the future.
