

Has anyone ever put more thought into insulation?

In terms of safeguarding the future of our planet, Superglass is in a unique position.

Our science can save energy. Our ideas can improve buildings. Our innovations can make a difference – and by choosing Superglass, so will you.

Our glass mineral wool is made from up to 84% recycled glass, reducing waste disposal and saving valuable resources that would otherwise go to landfill.

It has excellent thermal and acoustic performance, meeting every regulation easily – including fire protection with a reaction to Fire Classification A1. It's extremely easy and efficient to install, making it supremely cost-effective too. And it's breathable, reducing the risk of condensation in the building – plus you can always rely on it to consistently match its stated performance levels.

Helping you create Intelligent Environments

Most of all though, it allows us to optimise living and working environments, and make energy more affordable – while saving housebuilders time and money, so they can build more homes faster to meet today's demand and tomorrow's energy needs.

We call them Intelligent Environments and they're made possible by our latest generation insulation products, using our innovative new approach to glass chemistry: THINKTECH, smarter technology for every home.
